

CHAPTER 4: IMPLEMENTATION

4.1 IMPLEMENTATION ENVIORNMENT

- Technology, change in mind sets and better urban planning can help make our cities safer for women, according to experts who spoke at the conference 'Half a Billion Locked In: Perspectives on Safe Cities and Women Empowerment,' on 19 March at Observer Research Foundation.
- Noting that stricter implementation of laws is the key to women's safety, participants expressed hope that women's safety is included in election manifestos and that women's issues become electoral issues.
- Our Application will allow those on your list to track your movements in real time. We have designed user friendly APP so that it may reduce the work load of customers especially women. Going to be implemented in real world where women feel insecure our Application would act as a backbone.
